

ProfitSword for Enterprise & Groups

Automated, real-time insights across your portfolio

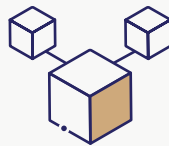

Hospitality Executives often lack the visibility into company performance across their property portfolios because of disparate systems. This causes data to be inaccurate or delayed and manual data entry increases the margin for error leaving staff overwhelmed by the data gathering process. ProfitSword automates this process and consolidates the view of portfolio performance in real-time to increase efficiency and accountability.

ProfitSword provides business intelligence software for management companies and ownership groups to enable fast, smart, data-driven decision-making while eliminating the manual work of data collection from across properties.

Portfolio Management

Gain visibility across all brands, properties, and departments to measure your overall performance and plan for the future at a macro level.

Unlimited Data Sets

With consolidation from all your systems, create “what if” scenarios with unique data to enable forward-thinking decisions and budgeting.

Live Updates

Increase efficiency, enhance profitability and scale your business with real-time analytics and customizable dashboards.
